Summary

Senior Backend Engineer with 3+ years of experience designing and scaling distributed financial systems handling millions of operations per day. Led architecture and development of asynchronous processing platforms, request-routing systems, and high-throughput backend services. Experienced in mentoring engineers, driving technical decisions, and building scalable and reliable backend systems.

Experience

Yabx (Comviva)

Feb 2023 – Present

Senior Software Engineer

- Architected and built a **transparent multi-bank HTTP proxy platform** using **Node.js** and **Express.js**, routing customer API traffic to respected banks LMS systems through **MSISDN based tenant resolution**.
- Designed **asynchronous bulk ingestion workflows** using **RabbitMQ**, **Redis**, and **PostgreSQL**, supporting **1M+ row uploads** with parallel workers, idempotent processing, and batch job execution.
- Architected and scaled a **distributed job orchestration platform** processing **12M+ jobs/day**, improving throughput **40% using partitioned PostgreSQL and asynchronous workers**.
- Built **financial reconciliation pipelines** processing **300K+ transactions/day** with **idempotent workflows and automated failure recovery**.
- Refactored **credit rule processing engine**, reducing execution time **from 9 hours → 2–3 hours** using **parallel processing and workload partitioning**.
- Created **consent management platform** for **2M+ users** using **current-state and audit-history tables** to track opt-in/opt-out actions and support regulatory audits.

Software Engineer

Aug 2023 – Dec 2024

- Designed **asynchronous backend allocation service**, reducing product offer generation time **from 2 minutes → 10 seconds**.
- Improved **backend API latency by 40%** through **SQL query optimization and indexing strategies** on high-traffic endpoints.
- Developed and maintained backend **RESTful APIs** using **Node.js (Express.js)** for a loan collection portal, enabling internal teams to manage payments, repayment schedules, and loan status workflows.
- Developed **RESTful APIs** enabling internal services to interact with credit systems and customer loan data.

Product Development Engineering Intern

Feb 2023 – Aug 2023

- Resolved **18K+ static analysis issues across backend services**, improving code quality and maintainability.

Technical Skills

Languages: Ruby, JavaScript (Node.js), Python

Frameworks & Libraries: Ruby on Rails, Express.js

Databases: PostgreSQL, MongoDB, Redis

Messaging: RabbitMQ, Background Job Processing

Awards & Recognition

- **Certificate of Excellence** for outstanding performance — Q2 FY 2024–25.
- **Team Excellence Award (3×)** for exceptional collaboration and delivery — FY 2023–24 to FY 2025–26.

Education

National Institute of Technology Raipur, Chhattisgarh

2020 – 2023

Master of Computer Applications

CGPA: 8.60

Maharishi Arvind Inst. of Sci. & Mgmt. Jaipur, Rajasthan

2016 – 2019

Bachelor of Computer Applications

Percentage: 72.66%
